## ป Introduction

### 1.1 Getting Started

How to prepare the EDM 35 for use
For convenience you have a check list below to be sure that all preparations of the EDM are made before the application. Page references are mentioned so you can easily find the point in question in this manual. If the EDM is received in modules start at point 1, otherwise start at point 6.

1. Select all modules necessary for the application.
2. Set jumpers on the input module and if used also on the excitation output module and/or the analogue output module.
3. Insert all modules according to the drawing printed on the module:

- Power supply first (then from right to left).
- Mount blind covers in non-used slots.

4. Fill out the label on the main unit and the shipping box with missing information (ordering key for system, power supply, inputand output modules and ranges). Easy access to this information might help you later.
5. Insert engineering unit in the front cover and mount this.
6. The program needs information about the actual input range. Check input range selection and change if necessary.
7. Program panel meter to suit the application.

### 1.2 Overall Description

The EDM series 35 is based on a modular concept consisting of a main unit and plug-in modules. The concept provides the meter with high flexibility and versatility. The offer of input-, output- and power supply modules makes it possible to configure the meter to suit most applications.

Furthermore, the modular concept ensures that the stock costs are minimized.

### 1.3 Features

The main features of the EDM series 35 are:

- Modularity
- Continuous measurement and monitoring of the analog signal of the input variable
- Continuous monitoring of the measured value for exceeding the programmed setpoint values
- Setpoints individually programmable: Value, hysteresis, high/low alarm, time delay
- Separate programming of each output relay: energized/deenergized and status in overflow condition
- Additional software functions: scaling, data hold and peak/valley
- Input modules for measuring voltage (AC or DC), current (AC or DC), resistance, temperature ( Pt 100 or thermocouple J or K ), frequency or revolutions per minute
- Output modules with 1 or 2 relays or with analogue output (4-20 mA, 0-20 mA, 0-10 V)
- Power Supply modules for AC or DC supply as well as excitation supply for sensor supply
- Interface to Carlo Gavazzi's Dupline ${ }^{\circledR}$ Field and Installation Bus

The large variety of input signals of both electrical and industrial process variables make the EDM an extremely versatile instrument suitable for many applications.

The characteristics of the instrument are complemented by its easy programming and configuration in accordance with the application.

### 1.4 Block Schematic

### 2.1 Modules

### 2.1.1 Common description

The modules are parted into 3 categories: Power supply modules, input modules and output modules. Each module is dedicated to its own function or input variable.

To minimize the number of modules many input modules are designed to cover all ranges. If you want to change the input range just press the locking tabs and pull out the module to change a jumper position, reinstall the jumper and reprogram the range selection. If you change the range from low to high level or vice versa it might be necessary for you to use other terminal positions as well.

The input modules are available with terminals for program lock to protect against unauthorized admittance.

All modules are easy to plug in - for your information the slot position is marked on the drawing on the rear of the module.

### 2.1.2 Variants

### 2.1.2.1 Power Supply Modules

### 2.1.2.2 Input Modules

The input modules are divided into the following categories:

| Voltmeters $\quad$ (AC or DC) |  |
| :--- | :--- |
| Ammeters $\quad$ (AC, DC or 10A AC/DC) |  |
| Ohmmeters |  |
| Thermometers | (Pt 100, Thermocouple J or K) |
| Frequency - and Tachometers |  |
| Dupline ${ }^{\circledR}$ Analink Interface |  |

For voltmeters, ammeters, ohmmeters, frequency - and tachometers a jumper in the module determines the actual range for the module. Switching from one range to another also means that you are switching from one input circuit to another input circuit.

For ammeters 10 A AC/DC the jumper determines whether you are measuring AC current or DC current. The thermometers do not include a jumper - here the range is changed only through the programming.

For the Dupline ${ }^{\circledR}$ Analink interface module only the channel number has to be coded on two rotary switches.

All input modules occupy 1 slot and they are always placed at left (rear view of the main unit).

### 2.1.2.3 Output Modules

The output modules are divided into the following categories:

| Relay output | (1 or 2 relays) |
| :--- | :--- |
| Analogue output | (4-20 mA, $0-20 \mathrm{~mA}$ and $0-10 \mathrm{~V}$ ) |
| Excitation output | (for sensor supply) |

Depending upon the application you can choose between different output types: An output module with 1 or 2 relays and/or an output module with analogue output where you are able to select the required type of analogue output with the jumpers. The relay output module is always placed at right (rear view of the main unit).

With the excitation output module inserted you are able to supply for example sensors which are a part of the application. With a jumper you can select 12 or 24 VDC. This module shares slot \#2 with the analogue output module.

### 2.1.3 Modules and Slot Position

### 2.2 Main Unit

### 2.2.1 Description

The main unit includes a $31 / 2$ digit, 7 -segment display with alarm indicators, a motherboard for 1 power supply module and 3 input/output modules, a processing unit and a keyboard.

You can use the main unit as a $31 / 2$ digit indicator when inserting only a power supply module and an input module. If you extend the system with a relay output module and/or an analogue output module, you have a $31 / 2$ digit controller.

The main unit is delivered with 1 front cover, 1 manual, 2 mounting brackets, 2 gaskets for sealing, 1 set of engineering unit labels and 3 blind covers for unused slots.

### 2.2.2 Variants

The main unit is available in 3 different variants. The 3 types are:
Standard red display
High bright red display
Green display

### 2.2.3 Front Panel Description

(2)

(1) Keyboard
(S Set/Enter: Entry of variables
Selecting programming functions
$\Delta$
Up/Down: Up/down keys for display control
$\nabla$ Increasing and decreasing programming values

## (2) Display

3 1/2 digit (max. read-out 1999). Alphanumeric indication of:

- Measured value
- Programming parameters
(3) Alarm Indicators

Indicates when an alarm condition occurs.
" 1 " indicates alarm condition when a 1-relay output module is used (= 1 set point).
"1" and "2" indicate alarm condition when a 2-relay output module is used (= 2 set points).

## (4) Engineering Unit

Interchangeable unit label. A set of engineering unit labels is supplied with the EDM. The engineering unit has to be inserted by the customer.

## 3 Installation \& Operations before Use

### 3.1 Procedure

Before the instrument is ready for use, i.e. before it is ready for the application dependent programming, you have to prepare the instrument physically (engineering unit, modules etc.) - this is described in chapter 3.2 Installation.

Before you are connecting the instrument to the mains or the power supply you have to be sure that the right power supply module is used. This is discussed in chapter 3.3 Rated Operational Voltage.

You have to check the jumper settings on some of the modules. The range selected must be in accordance with your application. The jumper setting is shown in chapter 3.4 Jumper Setting on Modules.

After you have set the jumpers the processing unit must know which range you have selected. This "range code" has to be entered in the software when the instrument is turned on. Further information will be given to you in chapter 3.5 Input Range Selection.

### 3.2 Installation

First, if desired, you insert the engineering unit (3). You can choose a unit from the set of engineering unit labels.

3 Then you mount the front panel (2) on the instrument remember to seal with the enclosed gasket (the largest of the two enclosed). Place the remaining gasket round the body of the instrument and slide instrument into the panel aperture. To optimize the tightness be sure that the panel cut-out is completed and deburred. Be also aware that a too thin panel may distort and not provide sufficiant sealing.

Fasten the instrument with the two brackets (1).

If you later want to replace the engineering unit (3), you insert a screwdriver into the lateral slot in the front panel and turn (be careful!) the screwdriver as shown until the front panel has been completely removed. Replace the engineering unit.

You can find the panel cutout and the mechanical dimensions in chapter 7.3 Mechanical Dimensions.

### 3.3 Rated Operational Voltage

Before you switch on the instrument, make sure that the supply voltage corresponds to the rated operational voltage indicated on the power supply module.

Rated operational voltage

## Caution!!

Since the input circuitry is not galvanically isolated, the potential of the measured variable will be present on all connections to the unit (i.e. "HOLD" input). This is important specially when you are measuring line voltage and current.

### 3.4 Jumper Setting on Modules

As some modules are designed to cover several ranges it can be necessary for you to select the required range by moving an internal jumper. The major part of the input modules, the excitation output module and the analogue output module have this possibility for range selection. On the following pages the jumper setting is shown for the modules:

### 3.4.1 Voltmeters

3.4.2 Ammeters
3.4.3 Ohmmeters
3.4.4 Frequency - and tachometers
3.4.5 Dupline ${ }^{\circledR}$ Analink Interface module
3.4.6 Output modules

Note! Always remember to turn off the power supply before you plug in or pull out the modules.

### 3.4.1 Voltmeters

## Voltmeters

VDC input module 5100530/630
VAC input module 5100531/631

| Input Range | Jumper position |
| :---: | :---: |
| 200 mV | ${ }_{5}^{4}{ }_{6} \mathrm{C}_{3}^{1}$ |
| 2 V | ${ }_{6}^{4 \cdot e_{6}^{1}}{ }_{3}^{1}$ |
| 20 V | ${ }_{5}^{4}{ }_{6}^{4} \cdot{ }_{-1}^{2}$ |
| 200 V | ${ }_{5}^{4} \cdot{ }_{6}: \frac{1}{2}$ |
| 600 V |  |

### 3.4.2 Ammeters

Ammeters 0-5 A
ADC input module 5100532/632
AAC input module 5100533/633

| Input Range | Jumper position |
| :---: | :---: |
| 200 A | ${ }_{5}^{4} \cdot{ }_{6}^{4} \square_{3}^{1}$ |
| 2 mA | ${ }_{6}^{4}: \square_{3}^{1}$ |
| 20 mA | ${ }_{5}^{4} \square_{6} \square_{3}^{1}$ |
| 200 mA |  |
| 2 A |  |
| 5 A | ${ }_{6}^{4}{ }_{6}^{4}$ |

Ammeters 10 A
10 A AC/DC input module 5100534/634

| Input <br> Range | Jumper <br> position |
| :---: | :---: |
| 10 AAC | $2^{23}$ |
| 10 ADC | $2^{23}$ |

### 3.4.3 Ohmmeters

Ohmmeters
Ohm input module 5100535/635

| Input Range | Jumper position |
| :---: | :---: |
| $200 \Omega$ | ${ }_{5}^{4}{ }_{6} \mathrm{C}_{3}^{1}$ |
| $2 \mathrm{k} \Omega$ | ${ }_{6}^{4}{ }_{6}^{4}{ }_{3}^{1}$ |
| $20 \mathrm{k} \Omega$ | ${ }_{5}^{4}:{ }_{6}^{4} \cdot 1$ |
| $200 \mathrm{k} \Omega$ | ${ }_{5}^{4}:{ }_{6}^{4} \mathrm{~N}_{2}^{1}$ |

### 3.4.4 Frequency - and Tachometers

Frequency Meter Input module 5100541/641

| Range | Jumper position |
| :---: | :---: |
| 199.9 Hz | ${ }_{-}^{-38}$ |
| 1999 Hz | $\cdots$ |

## Frequency Meter

Input module 5100541/641

| Input | Jumper position |
| :---: | :---: |
| Namur | ( |
| NPN, PNP contact | (ey |
| 600 VAC | (ey |

### 3.4.4 Frequency - and Tachometers (cont.)

rpm: Revolutions per minute ppr: Pulses per revolution

Tachometer
Input module 5100540/640

| Range | Jumper position |
| :---: | :---: |
| $\begin{aligned} & 199.9 \mathrm{rpm} \\ & 30 \mathrm{ppr} \end{aligned}$ |  |
| $\begin{aligned} & 199.9 \mathrm{rpm} \\ & 60 \mathrm{ppr} \end{aligned}$ |  |
| $\begin{aligned} & 199.9 \mathrm{rpm} \\ & 100 \mathrm{ppr} \end{aligned}$ |  |
| $\begin{aligned} & 1999 \mathrm{rpm} \\ & 30 \mathrm{ppr} \end{aligned}$ |  |
| $\begin{aligned} & 1999 \mathrm{rpm} \\ & 60 \mathrm{ppr} \end{aligned}$ |  |
| $\begin{aligned} & 1999 \mathrm{rpm} \\ & 100 \mathrm{ppr} \end{aligned}$ |  |

Tachometer
Input module 5100540/640

| Input | Jumper position |
| :---: | :---: |
| Namur | - |
| NPN, PNP contact | - ${ }_{-1}$ |

### 3.4.5 Dupline ${ }^{\circledR}$ Analink Interface Module

Analink EDM 35 Plug-in Card Input module G 21391139

| Channel <br> number | Switch <br> position |
| :--- | :---: |
| S1: Group | A-P |
| S2: Channel | $1-8$ |

### 3.4.6 Output Modules

Range determined by jumper only. No software programming necessary.

Excitation Power Supply
Output module 5100526

| Output Voltage | Jumper position |
| :---: | :---: |
| 12 VDC | ${ }_{5}^{4} \cdot{ }_{6}^{1} \cdot{ }_{3}^{1}$ |
| 24 VDC |  |

Range determined by jumper only. No software programming necessary.

Analogue Output Module
Output module 5100560

| Output | Jumper position |
| :---: | :---: |
| 4-20mA |  |
| 0-20mA |  |
| 0-10V |  |

### 3.5 Input Range Selection

When you have selected the range on the input module (according to 3.4 Jumper Setting on Modules) you have to update or check the programming to be sure that the programmed range code corresponds to the range selected with the jumpers on the module. This is accomplished in calibration mode. Other functions in calibration mode are discussed in chapter 8.1 Calibration Mode. To change or check the programmed range follow the description below.

1. Press $\mathbf{S}$ and $\boldsymbol{\nabla}$ simultaneously and switch on the unit. The display shows PA5. Release the keys. The display shows PA5 for 2 s and then $\square$.
2. Press $\boldsymbol{\Delta}$ until ' 66 ' is displayed. Press $\mathbf{S}$ and the display now shows 5EL.
3. Press $\mathbf{S}$ to accept your entry to selection of range code. Now the display shows the current range code (a number between 0 and 12).
4. Press $\boldsymbol{\Delta}$ or to select a range code between 0 and 12 according to the range selected on the module and the list below.

| Range <br> code | Temp. | VDC | VAC | ADC | AAC | 10 A <br> AC/DC | Ohm | Freq. | Tachometer | Dup- <br> line |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | :---: | :---: |
| 0 | All |  |  |  |  |  |  |  |  |  |
| 1 |  | 0.2 V |  | 0.2 mA |  |  |  |  |  |  |
| 2 |  | 2 V |  | 2 mA |  |  |  |  |  |  |
| 3 |  | 20 V |  | 20 mA |  |  |  |  |  |  |
| 4 |  | 200 V |  | 0.2 A |  |  |  |  |  |  |
| 5 |  |  |  | 2 A |  |  |  |  |  |  |
| 6 |  | 690 V |  | 5 A |  | 10 ADC |  |  |  |  |
| 7 |  |  | 0.2 V |  | 0.2 mA |  | $200 \Omega$ | 200 Hz | $200 \mathrm{rpm} / 30 \mathrm{ppr}$ | All |
| 8 |  |  | 2 V |  | 2 mA |  | $2 \mathrm{k} \Omega$ | 2 kHz | $200 \mathrm{rpm} / 60 \mathrm{ppr}$ |  |
| 9 |  |  | 20 V |  | 20 mA |  | $20 \mathrm{k} \Omega$ |  | $200 \mathrm{rpm} / 100 \mathrm{ppr}$ |  |
| 10 |  |  | 200 V |  | 0.2 A |  | $200 \mathrm{k} \Omega$ |  | $2000 \mathrm{rpm} / 30 \mathrm{ppr}$ |  |
| 11 |  |  |  |  | 2 A |  |  |  | $2000 \mathrm{rpm} / 60 \mathrm{ppr}$ |  |
| 12 |  |  | 690 V |  | 5 A | 10 AAC |  |  | $2000 \mathrm{rpm} / 100 \mathrm{ppr}$ |  |

5. When the desired range code is displayed press $\mathbf{S}$. The display shows End for 2 seconds and automatically returns to RUN-mode.

The range selection is now completed, and the panel meter is ready to use. Now you can go ahead with customizing the program.

## 4 Operation \& Programming

Chapter 4 describes the different operating modes for the EDM. The calibration mode is described in details in chapter 3.5 (Range Input Selection) and chapter 8 (Appendix).

This chapter includes

### 4.1 Switching On

4.2 Operating Modes
4.2.1 Measurement and Control
4.2.2 Programming Mode
4.2.2.1 Access to programming
4.3 Programming
4.3.1 New Password
4.3.2 Decimal Point Selection
4.3.3 Electrical Input Range (HiE and LoE)
4.3.4 Display Span (Hi and Lo)
4.3.5 Alarm Setpoint(s) - Controllers
4.3.5.1 Setpoint 1
4.3.5.2 Hysteresis
4.3.5.3 Time Delay
4.3.5.4 High and Low Alarm
4.3.5.5 Relay Normally energized/ de-energized
4.3.5.6 Relay Staus in Overflow Condition
4.3.5.7 Setpoint 2

### 4.1 Switching On

When you switch on the unit, the display shows run for a few seconds, followed by the input signal value.

### 4.2 Operating Modes

The EDM can operate in 3 different modes: Measurement and control mode, programming mode and calibration mode.

The flowchart shows how you get access to the different modes of operation.

### 4.2.1 Measurement and Control

In the measuring and control operating mode the instrument has the following basic functions:

- Measurement of the input variable
- Display of the measured variable in the correct engineering unit
- Setpoint control with activation/deactivation of the alarm LED's and relays
- Detects when the input is out of range and indicating this with $\pm \mathrm{EE}$ in the display. The relay status will be as the preprogrammed fault condition
- 'Hold' input detection
- Update of peak and valley function
- If analogue output module is present, repetition of the displayed value in analogue form
The $\mathbf{S}, \mathbf{\Delta}$ and $\boldsymbol{\nabla}$ control the display. The normal function of the display is to indicate the measured input variable.

The following lines describe how you can use these for selecting information on the display during daily operation.

### 4.2.1.1 Setpoint 1 Value Read-out (SP1)

Press $\Delta$ and release.
After displaying the setpoint value for 2 seconds the instrument will return to display the input variable. Setpoint values are only shown if a relay output module (1 or 2 relays) is installed.

### 4.2.1.2 Setpoint 2 Value Read-out (SP2)

Press $\square$ and release.

### 4.2.1.3 Peak and Valley Values Read-out

Press $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ simultaneously and release.

### 4.2.1.4 Reset of Peak and Valley Values

Press $\boldsymbol{\Delta}, \boldsymbol{\nabla}$ and $\mathbf{S}$ simultaneously and release.
The peak and valley values are reset during power-up as well.

### 4.2.1.5 Programming Mode Access

Press and hold $\mathbf{S}$; then press $\mathbf{A}$. Release both immediately after the display shows PA5.

### 4.2.1.6 Calibration Mode Access

Press $\mathbf{S}$ and $\boldsymbol{\nabla}$ during power-up. Release both immediately after the display shows P月5.

### 4.2.1.7 'Hold' Function

The 'Hold' function is standard for all versions and is located on the terminals of the power supply module. By short-circuiting the 'Hold' input, the indication on the display is frozen. When the 'Hold' function is active, all other functions operate in normal way.

### 4.2.1.8 Setpoints

The setpoints can operate in four different ways depending on the programming. See the following drawing.

## Setpoint Operation

## Scaling Operation

### 4.2.2 Programming Mode

The programming mode allows the user to define the instrument parameters:

- Password for access to programming
- Decimal point position
- Minimum and maximum values of the electrical input range
- Display span
and for each alarm setpoint:
- Setpoint
- High or low alarm levels
- Hysteresis
- Time delay
- Alarm relay normally energized/de-energized
- State of alarm relay in overflow conditions

Stepping from the programming of one parameter to the programming of the next happens by pressing $\mathbf{S}$.
The normal measurement and control functions are not active in programming mode. The alarm outputs are OFF. The analogue output is low.

Termination of the programming mode and return to measurement and control mode follows automatically after completion of all programming steps or after 3 minutes without key activation.
The display will show End for 2 seconds.

### 4.2.2.1 Access to Programming Mode

1. Press and hold $\mathbf{S}$; then press $\mathbf{A}$. Release both immediately after the display shows P月5.
During this phase the instrument asks for a password between 0 and 199 - the instrument is delivered with the password " 0 ".
2. If the password is not set to zero, press $\boldsymbol{\Delta}$ and/or $\nabla$ until the value (password) is displayed. Press $\mathbf{S}$ to enter.
If the entered password matches the stored password, the instrument automatically proceeds to the next step - otherwise it returns to measurement and control mode.

### 4.3 Programming

### 4.3.1 New Password

1. After you have entered the password the display shows PA5. After 2 s the stored value of the password is displayed. To retain the present value, press $\mathbf{S}$ to pass on to the next selection.
2. To modify the password, press $\boldsymbol{\Delta}$ and/or $\boldsymbol{\nabla}$ until the desired value is displayed; this has to be a number between 0 and 199.
Press $\mathbf{S}$ to pass on to the next parameter.
A password between 100 and 199 gives direct access to setpoint programming in the following way: Enter programming mode and press ' S '. Then you will automatically jump directly to setpoint programming. After the setpoint programming the programming mode is terminated.

### 4.3.2 Decimal Point Selection

Decimal point selection is relative to the displayed value.

1. After selection of the password the display will show $\square P$ for 2 s . The current position of the decimal point is then indicated on the display by a steady light as 111.1 .
2. Change the position of the decimal point using $\boldsymbol{\Delta}$ (shift to left) and/or $\boldsymbol{\nabla}$ (shift to right). Press $\mathbf{S}$ to enter and pass on to next.

### 4.3.3 Electrical Input Range ( HiE and LoE)

This feature allows you to define an electrical input range different from the standard range. For example, for EDM with full-scale $20 \mathrm{~mA}( \pm 19.99$ mA ), it is possible to select an electrical input range from 4.00 mA to 19.99 mA by proceeding as follows:

1. After programming the decimal point the display shows $H, E$ for 2 seconds signifying the maximum of the electrical input range. The HiE value stored in the memory is shown on the display, for example 1.29 .
To retain the value shown, press $\mathbf{S}$ to pass on to next parameter.
2. To select a new value of HiE , press $\boldsymbol{\Delta}$ and/or $\boldsymbol{\nabla}$ until the desired value is displayed, for example 1999 . Press $\mathbf{S}$ to accept.
3. After programming the $\mathbf{H i E}$ the display shows $L \square E$ for 2 s
signifying the minimum of the electrical input range.
The LoE value stored in the memory is then shown on the display.
To modify the LoE value proceed as described for the HiE value, but select the value 4.00 (according to the example).
Press $\mathbf{S}$ to accept the value and pass on to the next parameter.
Note! LoE and HiE values are shown in the same unit of measurement as the input module range.

### 4.3.4 Display Span (Hi and Lo)

This allows you to define the display span (in engineering units) corresponding to the previously defined electrical input range.

For example EDM 20 mA
Programmed electrical input range: 4.00 to 19.99 [mA]
Programmed display span: $\quad 0.00$ to 8.00 [bar]
Lo: Displayed value corresponding to minimum of the input range (LoE).
Hi : Displayed value corresponding to maximum of the input range (HiE).
The display can be programmed within the instrument read-out range indicated in the technical data tables. Since the link between the electrical and the displayed value is completely adjustable/variable, it is possible to correlate a minimum electrical value to a maximum display value, and vice versa (scale inversion).

The best resolution is achieved when $\left|\frac{\mathrm{HiE}-\mathrm{LoE}}{\mathrm{Hi}-\mathrm{Lo}}\right| \geq 1$

1. After selecting the electrical input range, the display shows $H_{1}$ for 2 s , signifying the maximum of the display span. The display then shows the $\mathbf{H i}$ value stored in the memory. Press $\mathbf{S}$ to retain the current value.
2. To select a new Hi value, press $\boldsymbol{\Delta}$ and/or $\boldsymbol{\nabla}$ until the desired value is displayed. Press $\mathbf{S}$ to enter the value.
3. After entering the $\mathbf{H i}$ value the display shows $L \square$ for 2 s , signifying the minimum of the display span. The display shows the current value of Lo. To change or retain the Lo value proceed as described
for Hi. After the entering of the value with $\mathbf{S}$ the instrument passes on to the next parameter.

### 4.3.5 Alarm Setpoint(s) - Controller

The EDM automatically senses if a relay output module is installed in the instrument, and programming mode proceeds to entry of the data relating to the setpoints.
If no relay output module is installed, programming mode will be terminated after the display span programming.

Note! The setpoint is relative to the display span, and not to the electrical input range.

### 4.3.5.1 Setpoint

1. After programming the display span the display shows 5P for 2 s , indicating that the current programming concerns setpoint 1.
The display will then show the stored setpoint value.
To retain the value shown, press $\mathbf{S}$.
2. To select a new value for SP1, press $\boldsymbol{\Delta}$ and/or $\boldsymbol{\nabla}$ until the desired value is displayed. Press $\mathbf{S}$ to accept and pass on to the next parameter.

### 4.3.5.2 Hysteresis

The hysteresis is the difference between the programmed setpoint value (the value at which the alarm is set ON) and the value at which the alarm is disabled. The hysteresis is related to the display span and it is an absolute value. See drawing on page 17.

1. The display shows $\$ 45$ for approx. 2 s. The display then shows the current value stored in the memory.
Accept the value by pressing $\mathbf{S}$.
2. To select a new value for the hysteresis press until the desired value is displayed. Now press ( 4 and/or $\mathbf{S}$ to accept this value and pass on to the next parameter.

### 4.3.5.3 Time Delay

1. When entering this parameter (from 0 to 99 s ) the display will show dEL for approx. 2 s . Then the display shows the current value stored in the memory - the value is expressed in seconds. To accept this value press $\square$
2. If you wish to change the value, press (1) and/or $\nabla$ until the required value is displayed.
Press $\mathbf{S}$ to enter the value and pass on to the next selection.

### 4.3.5.4 High and Low Alarm

1. When you exit from the time delay programming the display shows $\omega P$ if a high alarm is the current status or $d \square$ if the low alarm is the current status.

To continue with the current status, press $\mathbf{S}$ and go on with the next parameter.
2. To change the status, press $\boldsymbol{\Delta}$ or $\boldsymbol{\nabla}$ to switch the status.

Press $\mathbf{S}$ to accept and pass on to the next parameter.

### 4.3.5.5 Alarm Relay Energized/De-energized

You can choose if the relay has to be energized or de-energized in the absence of an alarm.

1. The display will show $n d$ for a normally energized relay or it will show $n d$ for a normally de-energized relay.
Press $\mathbf{S}$ to keep the current value.
2. To select a new relay status, press $\mathbf{A}$ to select the normally energized status (the display will show nd ) or press $\nabla$ to select the normally de-energized status (the display will show nd).

Press $\mathbf{S}$ to accept and pass on to the next selection.

### 4.3.5.6 Relay Status in Overflow Condition

You can choose how the relay shall react in overflow conditions as well, namely whether the relay has to be ON or OFF.

1. The display will show $\square_{n}$ for relay $\mathbf{O N}$ in overflow conditions or it will show DFF for relay OFF in overflow conditions.
Press $\mathbf{S}$ to keep the current value and pass on.
2. If you will change the status, press $\boldsymbol{\Delta}$ to select relay ON (the display will show $\square \square$ ) or press $\nabla$ to select relay OFF (the display will show $\square F F$ ). Press $\mathbf{S}$ to terminate setpoint 1 programming.

All parameters are now programmed (with a 1 relay output module installed) and the programming mode is terminated automatically. This will be shown in the display with End. The system restarts and is back in run-mode.

### 4.3.5.7 Setpoint 2

If a 2 relay output module is installed the display will show [5P] after the termination of 4.3.5.6 Relay Status in Overflow Condition.

To select the parameters for setpoint 2, proceed as explained for setpoint 1.

After programming all parameters for setpoint 2, the programming mode is terminated automatically and shown in the display as End.

The system restarts and is back in run-mode.

### 5.1 DC Ammeters with current output transducers

If the instrument has to be connected to 4-wire transducers, connect to screw terminals as shown in the figure.

If the instrument has to be connected to 3-wire transducers powered by the instrument, connect to screw terminals as indicated.

### 5.1.3

Connect as indicated if the instrument has to be connected to 2 -wire transducers powered by the instrument.

## Note:

The shown configuration is only for EDM with 20 mA input.

### 5.2 AC Ammeter with 5 AAC input

### 5.2.1

The electrical FS of this instrument is $\mathbf{H i E}=1999$; to maintain maximum resolution, this value should not be modified (during programming).

If the instrument is connected to a current transformer (5 AAC secondary current) with a primary current of 5-250 AAC, the display span should be programmed so that the $\mathbf{H i}$ value corresponds to the input value of the CT primary.

Example:
Electrical full-scale: 0-5 AAC
LoE = 0
$\mathrm{HiE}=19.99$
Display span: 0-250 AAC
Lo $=0$
$\mathrm{Hi}=250(250(\mathrm{Hi})=250$ A CT primary)
See also 4.1 Modes of Operation: Scaling Operation

## © Ordering Reys

As the EDM is modular, you can assemble a unit of modules without using tools. All ranges of the input modules are calibrated from the factory.

## EDM Components

A basic EDM indicator consists of a main unit, an input module and a power supply module. The mechanical components are included in the main unit. To the basic system you can add: analogue output, one or two relay outputs and excitation power supply for connected sensors (analogue output excludes the excitation output module).

### 6.1 Ordering Key for Modules

Display Modules (Main Unit): $\quad$ Part Number

## Ordering Key Example

## 7 Specifications

### 7.1 Main Unit

### 7.1.1 General Specifications

| Modular Panel Meter | $31 / 2$ digit indicator/controller. |
| :--- | :--- |
| Display | 7-segment, height 14.2 mm , red LED. <br> 2 red LED's for indication of relay ON. <br>  <br>  <br>  <br> Optional: <br> 1) High bright red display and LED's. <br> 2) Green display and 2 yellow LED's. |

Max. and min. indication -1999 to 1999
A/D converter Special dual slope.
Approx. 2 display/relay updates per second.
Accuracy See module specifications.

| Warm-up to rated <br> accuracy | Current: 10 minutes; voltage: 2 |  |
| :--- | :--- | :--- |
| CMRR | 100 dB | GR $=1 \mathrm{k} \Omega$. |
| NMRR | 50 dB | GR $=50 \Omega$. |

Temperature drift See module specifications.
Excitation output See module specifications.
Degree of protection IP 65 (front), IP 20 (behind panel).
Operating temperature $0^{\circ} \mathrm{C}$ to $50^{\circ} \mathrm{C}\left(32^{\circ} \mathrm{F}\right.$ to $\left.122^{\circ} \mathrm{F}\right)$.
(R.H. < 90\% non-condensing).

Storage temperature $\quad-10^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F}\right.$ to $\left.140^{\circ} \mathrm{F}\right)$.
(R.H. $<90 \%$ non-condensing).

| Approvals | UL, CSA. |
| :--- | :--- |
| Weight | Approx. 350 g. (affected by configuration). |
| Housing dimensions | $48 \times 96 \times 89 \mathrm{~mm}$. |
| Housing material | ABS/Polycarbonate blend. |

| Housing colours | Black (front red, optional green). <br> Sodule connection <br> Screw terminals. |
| :--- | :--- |
|  |  |
| 7.1.2 Supply Specifications |  |
| Rated operational | $230 \mathrm{VAC} \pm 10 \%, 50 / 60 \mathrm{~Hz} \pm 5 \mathrm{~Hz}(5100520)$. |
| voltage | Also usable at line voltages of: |
|  | $240 \mathrm{VAC}+6 /-15 \%, 220 \mathrm{VAC}+15 /-6 \%$. |
|  | $115 \mathrm{VAC} \pm 10 \%, 50 / 60 \mathrm{~Hz} \pm 5 \mathrm{~Hz}(5100521)$. |
|  | Also usable at line voltages of: |
|  | $120 \mathrm{VAC}+6 /-15 \%, 110 \mathrm{VAC}+15 /-6 \%$. |
|  | $48 \mathrm{VAC} \pm 10 \%, 50 / 60 \mathrm{~Hz} \pm 5 \mathrm{~Hz}(5100522)$. |
|  | $24 \mathrm{VAC} \pm 10 \%, 50 / 60 \mathrm{~Hz} \pm 5 \mathrm{~Hz}(5100523)$. |
|  | 12 to $48 \mathrm{VDC} \pm 15 \%(5100524)$. |

Rated operational power 6 VA (12 to 48 VDC: 6 W).

### 7.1.3 Programming Specifications

## Scaling

Electrical input range Prog. within the whole measuring range.
Display range Programmable within the whole scale.
Decimal point position Programmable

## Alarm setpoints

Number of setpoints 0,1 or 2
Setpoint adjustment -1999 to 1999.
Hysteresis adjustment 1-1999.
Time delay adjustment $0-99 \mathrm{~s}$.

Alarm type
Relay status

High or low, programmable.
"Normally energized" or "Normally de-energized relay coil, programmable.

Diagnostics
Overrange
EE
Underrange
-EE

### 7.2 Module Specifications \& Scaling Values

In this chapter the specifications and the scaling values (input modules only) are described for each module. The scaling values inform how the decimal point, the high/low electrical inputs and the high/low display values have to be programmed to obtain a 1:1 relationship between input and display.

All input modules have the programming lock option. By interconnecting the two terminals marked "PROG LOCK" it is still possible to see the programmed parameters, but access to the programmed parameters will be disabled. If attempting to change parameters, the panel meter will lock for approx. 3 minutes and then restart.
Where the standard ordering number for an input module is $510053 x$ the ordering number for the module with the programming lock option is $510063 x$. The modules are described as follows:

## Input Modules

| 7.2.1 | DC Voltmeter | $(5100 \times 30)$ |
| :--- | :--- | :--- |
| 7.2.2 | AC Voltmeter | $(5100 \times 31)$ |
| 7.2.3 | DC Ammeter | $(5100 \times 32)$ |
| 7.2.4 | AC Ammeter | $(5100 \times 33)$ |
| 7.2 .5 | 10 A AC/DC Ammeter | $(5100 \times 34)$ |
| 7.2 .6 | Ohmmeter | $(5100 \times 35)$ |
| 7.2 .7 | Pt 100 | $(5100 \times 36)$ |
| 7.2 .8 | Pt 100 $850^{\circ} \mathrm{C}$ | $(5100 \times 39)$ |
| 7.2 .9 | Thermocouple Type J | $(5100 \times 37)$ |
| 7.2 .10 | Thermocouple Type K | $(5100 \times 38)$ |
| 7.2 .11 | Frequency meter | $(5100 \times 41)$ |
| 7.2 .12 | Tachometer | $(5100 \times 40)$ |

$$
\text { 7.2.13 Dupline }{ }^{\circledR} \text { Analink Interface (G } 2139 \text { 1139) }
$$

## Output Modules

| 7.2.14 | Excitation output | $(5100526)$ |
| :--- | :--- | :--- |
| 7.2.15 | Analog output | $(5100560)$ |
| 7.2.16 | Relay output | $(5100561-5100562)$ |

## Power Supply Modules

7.2.17 AC and DC
(5100520-5100524)
All specifications are measured at $23^{\circ} \mathrm{C}$ ambient temperature and rated operational supply voltage.
Accuracy mentioned in the tables means $\pm X \%$ of reading $\pm Y$ digits.

### 7.2.1 DC Voltmeter (5100530 and 5100630)

Specifications

| Code (EDM) | Range | Resolution | Accuracy | Temperature drift | Input resistance | Max. overload ( $\leq 1 \mathrm{~min}$.) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| V1D | $\pm 199.9 \mathrm{mV}$ | 0.1 mV | 0.2\% $\pm 2$ dgt | $\begin{aligned} & \pm 100 \mathrm{ppm} /{ }^{\circ} \mathrm{C} \\ & \pm 0.05 \mathrm{dgt} /{ }^{\circ} \mathrm{C} \end{aligned}$ | $100 \mathrm{k} \Omega$ | 50 V |
| V2D | $\pm 1.999 \mathrm{~V}$ | 1 mV |  |  |  | 230 V |
| V3D | $\pm 19.99 \mathrm{~V}$ | 10 mV |  |  | $1 \mathrm{M} \Omega$ | 690 V |
| V4D | $\pm 199.9 \mathrm{~V}$ | 0.1 V |  |  |  |  |
| V5D | $\pm 600 \mathrm{~V}$ * | 1 V |  |  |  |  |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| V1D | $\pm 199.9 \mathrm{mV}$ | 111.1 | 199.9 | -199.9 | 199.9 | -199.9 |
| V2D | $\pm 1.999 \mathrm{~V}$ | 1.111 | 1.999 | -1.999 | 1.999 | -1.999 |
| V3D | $\pm 19.99 \mathrm{~V}$ | 11.11 | 19.99 | -19.99 | 19.99 | -19.99 |
| V4D | $\pm 199.9 \mathrm{~V}$ | 111.1 | 199.9 | -199.9 | 199.9 | -199.9 |
| V5D | $\pm 600 \mathrm{~V} *$ | 1111 | 1999 | -1999 | 690 | -690 |

V5D is the default range set from factory.

* Nominal voltage according to IEC 664-1. The measuring range includes $15 \%$ tolerance equal to $\pm 690$ VDC.

### 7.2.2 AC Voltmeter (5100531 and 5100631)

Specifications ( $40 \mathrm{~Hz}-1 \mathrm{kHz}$ )

| Code (EDM) | Range | Resolution | Accuracy | Temperature drift | Input resistance | Max. overload ( $\leq 1 \mathrm{~min}$.) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| V1A | 199.9 mV | 0.1 mV | 0.3\% $\pm 3 \mathrm{dgt}$ | $\begin{gathered} \pm 150 \mathrm{ppm} /{ }^{\circ} \mathrm{C} \\ \pm 0.2 \mathrm{dgt} /{ }^{\circ} \mathrm{C} \end{gathered}$ | $100 \mathrm{k} \Omega$ | 50 V |
| V2A | 1.999 V | 1 mV |  |  |  | 230 V |
| V3A | 19.99 V | 10 mV |  |  | $1 \mathrm{M} \Omega$ | 690 V |
| V4A | 199.9 V | 0.1 V |  |  |  |  |
| V5A | 600 V * | 1 V |  |  |  |  |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| V1A | 199.9 mV | 111.1 | 199.9 | -0.1 | 199.9 | -0.1 |
| V2A | 1.999 V | 1.111 | 1.999 | -0.001 | 1.999 | -0.001 |
| V 3 A | 19.99 V | 11.11 | 19.99 | -0.01 | 19.99 | -0.01 |
| V 4 A | 199.9 V | 111.1 | 199.9 | -0.1 | 199.9 | -0.1 |
| V 5 A | $600 \mathrm{~V} *$ | 1111 | 1999 | -3 | 690 | -1 |

V5A is the default range set from factory.

* Nominal voltage according to IEC 664-1. The measuring range includes $15 \%$ tolerance equal to 690 VAC.
7.2.3 DC Ammeter (5100532 and 5100632)

## Specifications

| Code (EDM) | Range | Resolution | Accuracy | Temperature drift | Voltage drop | Max. overload ( $\leq 10$ s) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A1D | $\pm 199.9 \mu \mathrm{~A}$ | $0.1 \mu \mathrm{~A}$ | 0.2\% $\pm 2$ dgt | $\begin{aligned} & \pm 100 \mathrm{ppm} /{ }^{\circ} \mathrm{C} \\ & \pm 0.05 \mathrm{dgt} /{ }^{\circ} \mathrm{C} \end{aligned}$ | < 200 mV | 20 mA |
| A2D | $\pm 1.999 \mathrm{~mA}$ | $1 \mu \mathrm{~A}$ |  |  |  | 100 mA |
| A3D | $\pm 19.99 \mathrm{~mA}$ | $10 \mu \mathrm{~A}$ |  |  |  | 200 mA |
| A4D | $\pm 199.9 \mathrm{~mA}$ | 0.1 mA |  |  |  | 500 mA |
| A5D | $\pm 1999 \mathrm{~mA}$ | 1 mA |  | $\pm 200 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ |  | 4 A |
| A6D | $\pm 5.00 \mathrm{~A}$ | 10 mA |  | $\pm 0.1 \mathrm{dgt} /{ }^{\circ} \mathrm{C}$ |  | 8 A |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A1D | $\pm 199.9 \mu \mathrm{~A}$ | 111.1 | 199.9 | -199.9 | 199.9 | -199.9 |
| A2D | $\pm 1.999 \mathrm{~mA}$ | 1.111 | 1.999 | -1.999 | 1.999 | -1.999 |
| A3D | $\pm 19.99 \mathrm{~mA}$ | 11.11 | 19.99 | -19.99 | 19.99 | -19.99 |
| A4D | $\pm 199.9 \mathrm{~mA}$ | 111.1 | 199.9 | -199.9 | 199.9 | -199.9 |
| A5D | $\pm 1999 \mathrm{~mA}$ | 1111 | 1999 | -1999 | 1999 | -1999 |
| A6D | $\pm 5 \mathrm{~A}$ | 11.11 | 19.99 | -19.99 | 5.00 | -5.00 |

A6D is the default range set from factory.

### 7.2.4 AC Ammeter (5100533 and 5100633)

Specifications

| Code (EDM) | Range | Resolution | Accuracy | Temperature drift | Voltage drop | Max. overload ( $\leq 10$ s) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A1A | $199.9 \mu \mathrm{~A}$ | $0.1 \mu \mathrm{~A}$ | 0.3\% $\pm 3$ dgt | $\begin{gathered} \pm 150 \mathrm{ppm} /{ }^{\circ} \mathrm{C} \\ \pm 0.5 \mathrm{dgt} /{ }^{\circ} \mathrm{C} \end{gathered}$ | < 200 mV | 20 mA |
| A2A | 1.999 mA | $1 \mu \mathrm{~A}$ |  |  |  | 100 mA |
| A3A | 19.99 mA | $10 \mu \mathrm{~A}$ |  |  |  | 200 mA |
| A4A | 199.9 mA | 0.1 mA |  |  |  | 500 mA |
| A5A | 1999 mA | 1 mA |  | $\pm 200 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ |  | 4 A |
| A6A | 5.00 A | 10 mA | 0.5\% $\pm 3 \mathrm{dgt}$ | $\pm 0.5 \mathrm{dgt} /{ }^{\circ} \mathrm{C}$ |  | 8 A |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A1A | $199.9 \mu \mathrm{~A}$ | 111.1 | 199.9 | -0.1 | 199.9 | -0.1 |
| A2A | 1.999 mA | 1.111 | 1.999 | -0.001 | 1.999 | -0.001 |
| A3A | 19.99 mA | 11.11 | 19.99 | -0.01 | 19.99 | -0.01 |
| A4A | 199.9 mA | 111.1 | 199.9 | -0.1 | 199.9 | -0.1 |
| A5A | 1999 mA | 1111 | 1999 | -1 | 1999 | -1 |
| A6A | 5 A | 11.11 | 19.99 | -0.04 | 5.00 | -0.01 |

A6A is the default range set from factory.

### 7.2.5 10 A AC/DC Ammeter (5100534 and 5100634)

Specifications

| Code (EDM) | Range | Resolution | Accuracy | Temperature drift | Voltage drop | Max. overload ( $\leq 10$ s) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A7A | 10 A AC | 10 mA | 0.5\% $\pm 5 \mathrm{dgt}$ | $\begin{gathered} \pm 200 \mathrm{ppm} /{ }^{\circ} \mathrm{C} \\ \pm 0.5 \mathrm{dgt} /{ }^{\circ} \mathrm{C} \end{gathered}$ | < 200 mV | 12 A |
| A7D | $\pm 10$ A DC |  | 0.5\% $\pm 5 \mathrm{dgt}$ | $\begin{gathered} \pm 200 \mathrm{ppm} /{ }^{\circ} \mathrm{C} \\ \pm 0.1 \mathrm{dgt} /{ }^{\circ} \mathrm{C} \\ \hline \end{gathered}$ |  |  |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A7A | 10 A AC | 11.11 | 19.99 | -0.2 | 10 | -0.01 |
| A7D | $\pm 10$ A DC |  |  |  |  |  |

A7A is the default range set from factory.

### 7.2.6 Ohmmeter (5100535 and 5100635)

Specifications

| Code <br> (EDM) | Range | Resolution | Accuracy | Temperature <br> drift | Open cir- <br> cuit voltage | Excitation <br> current |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| R 1 D | $199.9 \Omega$ | $0.1 \Omega$ |  |  | 1 mA |  |
| R 2 D | $1.999 \mathrm{k} \Omega$ | $1 \Omega$ | $0.2 \% \pm 2 \mathrm{dgt}$ |  <br> $\pm 150 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ <br> $\pm 0.1 \mathrm{dgt} /{ }^{\circ} \mathrm{C}$ | 6 VDC | $100 \mu \mathrm{~A}$ |
| R 3 D | $19.99 \mathrm{k} \Omega$ | $0.01 \mathrm{k} \Omega$ |  |  |  |  |
| R 4 D | $199.9 \mathrm{k} \Omega$ | $0.1 \mathrm{k} \Omega$ |  |  | $1 \mu \mathrm{~A}$ |  |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| R1D | $199.9 \Omega$ | 111.1 | 199.9 | -0.1 | 199.9 | -0.1 |
| R2D | $1.999 \mathrm{k} \Omega$ | 1.111 | 1.999 | -0.001 | 1.999 | -0.001 |
| R3D | $19.99 \mathrm{k} \Omega$ | 11.11 | 19.99 | -0.01 | 19.99 | -0.01 |
| R4D | $199.9 \mathrm{k} \Omega$ | 111.1 | 199.9 | -0.1 | 199.9 | -0.1 |

R1D is the default range set from factory.

### 7.2.7 Pt 100 Thermometer (5100536 and 5100636)

Specifications

| Code (EDM) | Sensor type | Range | Resolution | Accuracy | Temperature drift |
| :---: | :---: | :---: | :---: | :---: | :---: |
| P1C | $\begin{aligned} & \text { RTD Pt } 100 \\ & \propto=0.00385 \end{aligned}$ | -100.0 to $199.9^{\circ} \mathrm{C}$ | $0.1{ }^{\circ} \mathrm{C}$ | $\begin{gathered} 0.2 \% \text { of rdg } \\ \pm 2 \mathrm{dgt} \end{gathered}$ | $\begin{aligned} & \pm 150 \mathrm{ppm} /{ }^{\circ} \mathrm{C} \\ & \pm 0.05 \text { count } /{ }^{\circ} \mathrm{C} \end{aligned}$ |
| P1F |  | -148.0 to $199.9^{\circ} \mathrm{F}$ | $0.2{ }^{\circ} \mathrm{F}$ | $\begin{gathered} 0.4 \% \text { of rdg } \\ \pm 4 \mathrm{dgt} \end{gathered}$ | $\begin{aligned} & \pm 180 \mathrm{ppm} /{ }^{\circ} \mathrm{F} \\ & \pm 0.1 \mathrm{count} /{ }^{\circ} \mathrm{F} \end{aligned}$ |
| P2F |  | -148.0 to $392^{\circ} \mathrm{F}$ | $1^{\circ} \mathrm{F}$ | $\begin{gathered} 0.2 \% \text { of rdg } \\ \pm 4 \mathrm{dgt} \\ \hline \end{gathered}$ |  |

### 7.2.7 Pt 100 Thermometer (5100536 and 5100636) - continued

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| P1C | -100.0 to $199.9^{\circ} \mathrm{C}$ | 111.1 | 199.9 | -100.0 | 199.9 | -100.0 |
|  |  |  | -148.0 |  |  |  |
| P1F | -148.0 to $199.9^{\circ} \mathrm{F}$ |  |  |  |  |  |
| P2F | -148.0 to $392^{\circ} \mathrm{F}$ | 1111 | 1999 | -100 | 392 | -148 |

P1C is the default range set from factory.

### 7.2.8 Pt $100850^{\circ} \mathrm{C}$ Thermometer (5100539 and 5100639)

Specifications

| Code <br> (EDM) | Sensor <br> type | Range | Resolution | Accuracy | Temperature <br> drift |
| :---: | :---: | :---: | :---: | :---: | :---: |
| P 2 C | RTD Pt 100 | -100 to $850^{\circ} \mathrm{C}$ | $1^{\circ} \mathrm{C}$ | $0.2 \%$ of rdg <br> $\pm 3 \mathrm{dgt}$ | $\pm 150 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ <br> $\pm 0.05 \mathrm{count} /{ }^{\circ} \mathrm{C}$ |
| P3F | $\propto=0.00385$ | -148 to $1562^{\circ} \mathrm{F}$ | $2{ }^{\circ} \mathrm{F}$ | $0.4 \%$ of rdg <br> $\pm 6 \mathrm{dgt}$ | $\pm 180 \mathrm{ppm} /{ }^{\circ} \mathrm{F}$ <br> $\pm 0.1 \mathrm{count} /{ }^{\circ} \mathrm{F}$ |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| P2C | -100 to $850^{\circ} \mathrm{C}$ | 1111 | 1999 | -235 | 850 | -100 |
|  | P3F |  |  |  | -148 |  |

P2C is the default range set from factory.

### 7.2.9 Thermocouple Type J Thermometer (5100537 and 5100637)

Specifications

| Code <br> (EDM) | Sensor <br> type | Range | Resolution | Accuracy | Temperature <br> drift |
| :---: | :---: | :---: | :---: | :---: | :---: |
| -JC | Thermocouple | -100 to $760^{\circ} \mathrm{C}$ | $1^{\circ} \mathrm{C}$ | $0.1 \%$ of rdg <br> $\pm 4 \mathrm{dgt}$ | $\pm 100 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ <br> $\pm 0.05 \mathrm{count} /{ }^{\circ} \mathrm{C}$ |
| Type J | -148 to $1400^{\circ} \mathrm{F}$ | $2^{\circ} \mathrm{F}$ | $0.1 \%$ of rdg <br> $\pm 8 \mathrm{dgt}$ | $\pm 180 \mathrm{ppm} /{ }^{\circ} \mathrm{F}$ <br> $\pm 0.1 \mathrm{count} /{ }^{\circ} \mathrm{F}$ |  |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| -JC | -100 to $760^{\circ} \mathrm{C}$ | 1111 | 1999 | -264 | 760 | -100 |
| -JF | -148 to $1400^{\circ} \mathrm{F}$ |  |  | -148 |  |  |

-JC is the default range set from factory.

### 7.2.10 Thermocouple Type K Thermometer (5100538 and 5100638)

## Specifications

| Code <br> (EDM) | Sensor <br> type | Range | Resolution | Accuracy | Temperature <br> drift |
| :---: | :---: | :---: | :---: | :---: | :---: |
| -KC | Thermocouple | -100 to $1250^{\circ} \mathrm{C}$ | $1^{\circ} \mathrm{C}$ | $3 \%$ of rdg <br> $\pm 3 \mathrm{dgt}$ | $\pm 100 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ <br> $\pm 0.05 \mathrm{count} /{ }^{\circ} \mathrm{C}$ |
|  |  | -148 to $1999^{\circ} \mathrm{F}$ | $2^{\circ} \mathrm{F}$ | $4 \%$ of rdg <br> $\pm 5 \mathrm{dgt}$ | $\pm 180 \mathrm{ppm} /{ }^{\circ} \mathrm{F}$ <br> $\pm 0.1 \mathrm{count} /{ }^{\circ} \mathrm{F}$ |

## Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| -KC | -100 to $1250^{\circ} \mathrm{C}$ | 1111 | 1999 | 160 | 1250 | -100 |
|  |  |  |  |  | -148 |  |

-KC is the default range set from factory.

Accuracy for Sub-ranges

| Code (EDM) | Sensor type | Range | Resolution | Accuracy | Temperature drift |
| :---: | :---: | :---: | :---: | :---: | :---: |
| -KC | Thermocouple Type K | -100 to $-50^{\circ} \mathrm{C}$ | $1^{\circ} \mathrm{C}$ | $\begin{aligned} & 1 \% \text { of rdg } \\ & +5 /-1 \mathrm{dgt} \end{aligned}$ | $\begin{aligned} & \pm 100 \mathrm{ppm} /{ }^{\circ} \mathrm{C} \\ & \pm 0.05 \mathrm{count} /{ }^{\circ} \mathrm{C} \end{aligned}$ |
|  |  | -50 to $780^{\circ} \mathrm{C}$ |  | $\begin{aligned} & 0.1 \% \text { of rdg } \\ & \pm 3 \mathrm{dgt} \end{aligned}$ |  |
|  |  | 780 to $1250^{\circ} \mathrm{C}$ |  | $\begin{aligned} & 0.25 \% \text { of } \mathrm{rdg} \\ & +1 /-3 \mathrm{dgt} \end{aligned}$ |  |
| -KF | Thermocouple Type K | -148 to $-58^{\circ} \mathrm{F}$ | $2^{\circ} \mathrm{F}$ | $\begin{aligned} & 1 \% \text { of rdg } \\ & +10 /-2 \mathrm{dgt} \end{aligned}$ | $\begin{aligned} & \pm 180 \mathrm{ppm} /{ }^{\circ} \mathrm{F} \\ & \pm 0.1 \mathrm{count} /{ }^{\circ} \mathrm{F} \end{aligned}$ |
|  |  | -58 to $1436{ }^{\circ} \mathrm{F}$ |  | $\begin{gathered} 0.1 \% \text { of } \mathrm{rdg} \\ \pm 5 \mathrm{dgt} \end{gathered}$ |  |
|  |  | 1436 to $1999{ }^{\circ} \mathrm{F}$ |  | $\begin{gathered} 0.25 \% \text { of } \mathrm{rdg} \\ +2 /-6 \mathrm{dgt} \end{gathered}$ |  |

### 7.2.11 Frequency Meter (5100541 and 5100 641)

Specifications

| Code (EDM) | Range | Resolution | Accuracy | Temperature drift | Input | Input imp. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| F1x | 5.0 to 199.9 Hz | 0.1 Hz | 1\% of reading $\pm 5 \mathrm{dgt}$ | $\pm 200 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ | Namur | $1 \mathrm{k} \Omega$ |
| F2x | 10 to 1999 Hz | 1 Hz |  |  | NPN, PNP, contact 600 VAC | $5 \mathrm{k} \Omega$ $600 \mathrm{k} \Omega$ |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| F1x | 5.0 to 199.9 Hz | 111.1 | 199.9 | 5.0 | 199.9 | 5.0 |
| F2x | 10 to 1999 Hz | 1111 | 1999 | 10 | 1999 | 10 |

F2B is the default range set from factory.

Connections: Namur: Vout sensor (+), IMP INPUT (-)
NPN, PNP, Contact: IMP INPUT and IN LO
AC voltages: 600 VAC and IN LO

### 7.2.12 Tachometer (5100540 and 5100 640)

## Specifications

| Code (EDM) | Range | Resolution | Accuracy | Temperature drift | Input/Input impedance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| T1A | 8.0 to $199.9 \mathrm{rpm}, 30 \mathrm{ppr}$ | 0.1 rpm | $1 \%$ of reading $\pm 5 \mathrm{dgt}$ | $\pm 200 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ | Namur / $1 \mathrm{k} \Omega$ |
| T1B | 8.0 to $199.9 \mathrm{rpm}, 30 \mathrm{ppr}$ |  |  |  | NPN, PNP, contact / $5 \mathrm{k} \Omega$ |
| T2A | 5.0 to $199.9 \mathrm{rpm}, 60 \mathrm{ppr}$ |  |  |  | Namur / $1 \mathrm{k} \Omega$ |
| T2B | 5.0 to $199.9 \mathrm{rpm}, 60 \mathrm{ppr}$ |  |  |  | NPN, PNP, contact / $5 \mathrm{k} \Omega$ |
| T3A | 3.0 to $199.9 \mathrm{rpm}, 100 \mathrm{ppr}$ |  |  |  | Namur / $1 \mathrm{k} \Omega$ |
| T3B | 3.0 to $199.9 \mathrm{rpm}, 100 \mathrm{ppr}$ |  |  |  | NPN, PNP, contact / $5 \mathrm{k} \Omega$ |
| T4A | 20 to $1999 \mathrm{rpm}, 30 \mathrm{ppr}$ |  |  |  | Namur / $1 \mathrm{k} \Omega$ |
| T4B | 20 to $1999 \mathrm{rpm}, 30 \mathrm{ppr}$ |  |  |  | NPN, PNP, contact / $5 \mathrm{k} \Omega$ |
| T5A | 10 to $1999 \mathrm{rpm}, 60 \mathrm{ppr}$ | 1 rpm |  |  | Namur / $1 \mathrm{k} \Omega$ |
| T5B | 10 to $1999 \mathrm{rpm}, 60 \mathrm{ppr}$ |  |  |  | NPN, PNP, contact / $5 \mathrm{k} \Omega$ |
| T6A | 10 to $1999 \mathrm{rpm}, 100 \mathrm{ppr}$ |  |  |  | Namur / $1 \mathrm{k} \Omega$ |
| T6B | 10 to $1999 \mathrm{rpm}, 100 \mathrm{ppr}$ |  |  |  | NPN, PNP, contact / $5 \mathrm{k} \Omega$ |

Scaling Values

| Code <br> (EDM) | Range | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| T1x | 8.0 to $199.9 \mathrm{rpm}, 30 \mathrm{ppr}$ | 111.1 | 199.9 | 8.0 | 199.9 | 8.0 |
| T2x | 5.0 to $199.9 \mathrm{rpm}, 60 \mathrm{ppr}$ | 111.1 | 199.9 | 5.0 | 199.9 | 5.0 |
| T3x | 2.0 to $199.9 \mathrm{rpm}, 100 \mathrm{ppr}$ | 111.1 | 199.9 | 2.0 | 199.9 | 2.0 |
| T4x | 20 to $1999 \mathrm{rpm}, 30 \mathrm{ppr}$ | 1111 | 1999 | 20 | 1999 | 20 |
| T5x | 10 to $1999 \mathrm{rpm}, 60 \mathrm{ppr}$ | 1111 | 1999 | 10 | 1999 | 10 |
| T6x | 10 to $1999 \mathrm{rpm}, 100 \mathrm{ppr}$ | 1111 | 1999 | 10 | 1999 | 10 |

T6B is the default range set from factory.

Connections: Namur: Vout Namur (+), IMP INPUT (-) NPN, PNP, Contact: IMP INPUT, Vout NPN/PNP and IN LO

### 7.2.13 Dupline ${ }^{\circledR}$ Analink Interface Module (G 2139 1139)

Scaling Values

| Code <br> (EDM) | DP | HiE | LoE | Hi | Lo |
| :---: | :---: | :---: | :---: | :---: | :---: |
| - | 111.1 | 1999 | 0 | $60.0\left[{ }^{\circ} \mathrm{C}\right]$ | $-30.0\left[{ }^{\circ} \mathrm{C}\right]$ |

The values shown are factory settings. The scaling values can be changed according to the used Dupline ${ }^{\circledR}$ Analink transmitter

### 7.2.14 Excitation Output Module (5100526)

## Specifications

| Output <br> voltage | Max. allowable <br> output current | Short-circuit <br> protection |
| :---: | :---: | :---: |
| $12 \mathrm{VDC} \pm 20 \%$ | 35 mA | Yes |
| $24 \mathrm{VDC} \pm 20 \%$ | 20 mA |  |

### 7.2.15 Analogue Output Module (5100560)

Specifications

| Output range | Accuracy | Temperature drift | Load resistance | Output resistance | Short-circuit protection | Time constant |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0-20 mA | $\pm 1 \% \pm 0.1 \mathrm{~mA}$ | $\pm 200 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ |  |  | Yes | 1 s |
| 4-20 mA |  |  | $<500 \Omega$ | N/A |  |  |
| 0-10V | $\pm 1 \% \pm 0.05 \mathrm{~V}$ |  | $>1000 \Omega$ | $\leq 3 \Omega$ |  |  |

Outputs are source signals and linearly proportional to the displayed values.
A) 0-20 mADC and 4-20 mADC output signal

Relationship between output signal and displayed value:

$$
\mathrm{I}=\frac{\mathbf{0 - 2 0 \mathrm { mA }}}{\frac{20(\mathrm{Rdg}-\mathrm{Lo})}{\mathrm{Hi}-\mathrm{Lo}}} \quad \mathrm{I}=\frac{\mathrm{4}-\mathbf{2 0} \mathrm{mA}}{16(\mathrm{Rdg}-\mathrm{Lo})} \mathrm{Hi-Lo}+4
$$

I = output current (mA)
Hi = max. programmed value of the whole measuring range
Lo $=\mathrm{min}$. programmed value of the whole measuring range
Rdg = displayed value
B) 0-10 V output signals

Relationship between output signal and displayed value:
$\mathrm{V}=\frac{10(\mathrm{Rdg}-\mathrm{Lo})}{\mathrm{Hi}-\mathrm{Lo}}$
V = output voltage ( V )
Hi = max. programmed value of the whole measuring range
Lo = min. programmed value of the whole measuring range
Rdg = displayed value
Relationship between over-/underrange and analogue output:

| Input signal <br> to EDM | Display <br> indication | Analogue output <br> $\mathbf{0}-\mathbf{2 0} \mathbf{~ m A}$ | Analogue Output <br> $\mathbf{4 - 2 0} \mathbf{~ m A}$ | Analogue Output <br> $\mathbf{0} \mathbf{- 1 0} \mathbf{~ V}$ |
| :---: | :---: | :---: | :---: | :---: |
| $>$ HiE (overrange) | EE | 20 mA | 20 mA | 10 V |
| $<$ LoE (underrange) | -EE | 0 mA | 4 mA | 0 V |

## Caution!

An insulation voltage of 125 Vrms between analogue output and all other connections, except relay outputs and power supply, limits the use of the system. The insulation voltage is only intended to break ground loops and not to serve as a safety function.

### 7.2.16 Relay Output Modules (5100561 and 5100562)

Specifications

| Module <br> number | SPDT <br> con- <br> tacts | Rated <br> Insulation <br> voltage | AC1 <br> load | DC1 <br> load | AC15 <br> load | DC13 <br> load | Min. <br> load | Dielectric <br> voltage | Update <br> frequency |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5100561 | 1 | 250 V | 5 A | 5 A | 2 A | 3 A | 0.1 A <br> 24 V | 2 kV AC <br> $(\mathrm{RMS})$ | 2 Hz |
| 5100562 | 2 | Basic | 250 VAC | 24 VDC | 250 VAC | 24 VDC |  |  |  |

### 7.2.17 Power Supply Modules AC and DC (5100520 to 5100524)

Specifications

| Module number | Input voltage | Rated oper. power | "Hold" input |
| :---: | :---: | :---: | :---: |
| 5100520 | $230 \mathrm{VAC} \pm 10 \%$ |  |  |
| 5100521 | $115 \mathrm{VAC} \pm 10 \%$ | 6 VA |  |
| 5100522 | $48 \mathrm{VAC} \pm 10 \%$ |  | Yes |
| 5100523 | $24 \mathrm{VAC} \pm 10 \%$ |  |  |
| 5100524 | $12-48 \mathrm{VDC} \pm 15 \%$ | 6 W |  |

### 7.3 Mechanical Dimensions

Below are shown the mechanical dimensions of the panel meter, the maximum allowable thickness of the panel and the panel cutout. All dimensions are in [mm].

Top view

Panel cutout

## 8 Appendixs

### 8.1 Reset of Password

The programming access password is factory set to ' 0 '. For returning the password to ' 0 ' you have to use the predefined password ' 99 ' in the procedure described below.

1. Press $\mathbf{S}$ and $\nabla$ simultaneously at Power ON until the display shows PA5. Release the keys. The display shows PA5 for 2 s.
2. Press $\boldsymbol{\Delta}$ or $\boldsymbol{\nabla}$, until the ' 99 ' password is displayed - then the instrument shows rE5.
3. Press $\mathbf{S}$ to reset the password or turn off the EDM to exit without any changes.

### 8.2 Quick Reference Guide

## Programming

| Mnemonic <br> (shown 2 s) | Programming Function |
| :---: | :---: | | Display |
| :---: |
| (examples) |

PA5 Password control. New password
$d P$ Decimal point selection
H,E High limit for electrical input range 1.999
$\boxed{L D E}$ Low limit for electrical input range -1.999
$\mathrm{H}_{1}$ Display span, value corresponding to HiE 1.999
$L D$ Display span, value corresponding to LoE $-1.999$

5 ST Setpoint 1 I.DID
$H 45 \quad$ Hysteresis (setpoint 1) 0.0101
$\begin{array}{lll}\square E L & \text { Time delay in seconds (setpoint 1) } & \square\end{array}$

nd nd Normally energized or de-energized relay nd nd
$\square \square$ RFF Relay on or off in overflow condition $\quad \square n \square F$
$5 P$ S $\quad$ Setpoint 2 parameters as setpoint 1
End End of programming

Enter programming mode: Press $\mathbf{S}$ and $\mathbf{A}$ simultaneously.
Change parameters: Press ( 4 and/or $\nabla$.

Step to next parameter: Press $\mathbf{S}$.
Commands \& Passwords

| Setpoint 1 value | Press $\boldsymbol{\Delta}$. |
| :--- | :--- |
| Setpoint 2 value | Press $\nabla$. |

Peak \& Valley values Press $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ simultaneously.
Reset Peak \& Valley Press

$\square$
$\nabla$
and
$\square$
simultaneously.
Programming Mode Press $\mathbf{S}$ and ..... (.
Calibration Mode Press $\mathbf{S}$ and $\boldsymbol{\nabla}$ during power-up.
Change Parameters Press

$\qquad$
and/or
$\nabla$.
Next Parameter
Press ..... S
Passwords Valid passwords ..... 0-199
Setpoint access only ..... 100-199
Passwords Input range selection ..... 66
Reset password ..... 99
